

DIMS Profibus Interface external

Item No. 500214

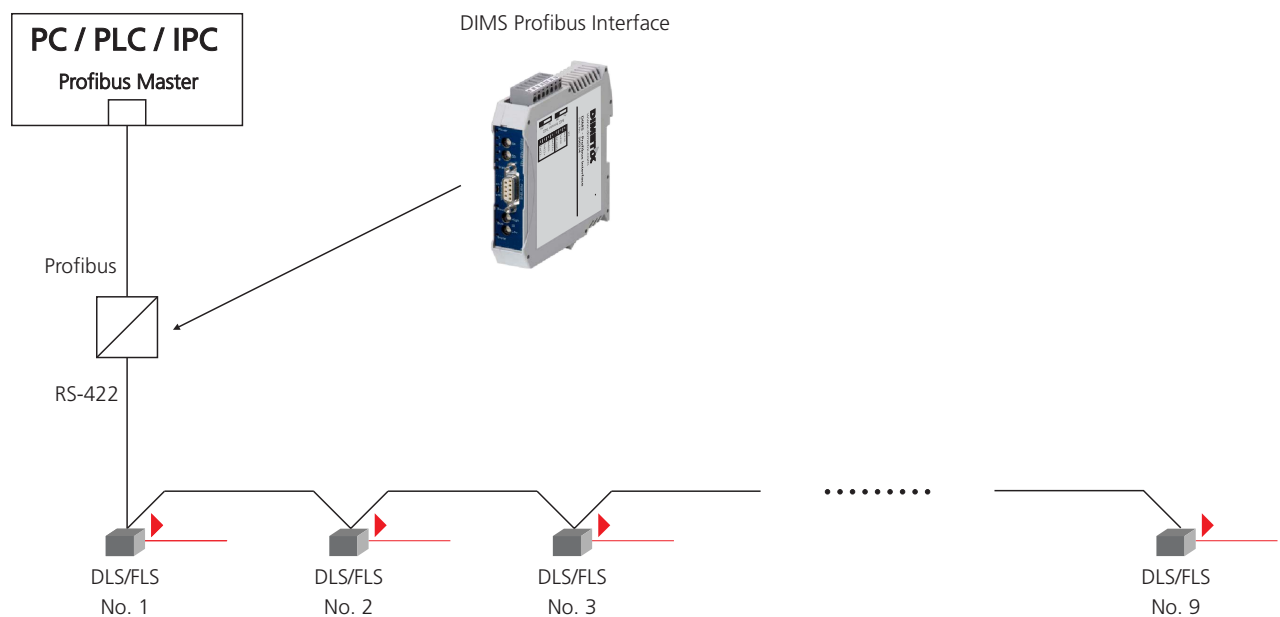

With the DIMS PROFIBUS interface it is possible to connect the DLS/FLS sensors directly to a PROFIBUS master.

The DIMS PROFIBUS interface is an IP20 PROFIBUS/RS-422 converter and is mountable on a 35 mm DIN rail. It supports baud rates up to 12 Mbaud. Furthermore, it is possible to control up to 10 DLS/FLS Laser Distance Sensors – making it a cost-efficient solution.

For detailed information, please see our Application Note AN 2005 «S7 PROFIBUS connection example» and the DIMS PROFIBUS documentation under Support at our website: www.dimetix.com.
